EDUCATION

Maharaja Surajmal Institute of Technology
B.Tech in Computer Science (AI/ML)
Seth Anandram Jaipuria School
Class XII

Aug 2022 – June 2026
CGPA: 8.4
2022
94.6%

EXPERIENCE

AI/ML & Full Stack Developer Intern
Rintech Chemicals Pvt Ltd

Apr 2026–Present

- Built a full-stack chemical inventory management app using the **MERN stack**, automating hazardous chemical identification and expiry flagging, reducing manual inspection time by **40%**
- Integrated REST APIs to sync real-time inventory data, cutting data retrieval latency by **30%** and improving stock visibility across departments

Frontend & AI/ML Intern

Feb 2026–Mar 2026

Orange Technologies Innovation Pvt Ltd

- Built responsive UI components for a **fintech ERP platform** using **React**, improving cross-device rendering consistency and reducing layout-related bugs by **35%**
- Integrated **Zustand** for global state management, streamlining data flow across modules and cutting state-related re-renders by **25%**

Tech Intern

Jul 2025–Sept 2025

Airtel Payments Bank

- Developed the UI for an internal **BAU (Business As Usual) tool** using **React**, streamlining daily operational workflows and reducing manual task execution time by **40%**
- Enhanced backend APIs and database systems supporting the tool, reducing latency by **20%** and saving **50+ hrs/month** in operational overhead

PROJECTS

CBT Voice Companion — AI Therapy Assistant

[Code](#)

- Built a research-grounded AI therapy assistant that generates responses based on **clinical CBT literature and structured therapy data**, using **RAG + LLM-based agents** to retrieve and refine context-aware replies, improving response relevance by **40%**
- Engineered a hybrid retrieval pipeline with **ChromaDB** (vector search) and **BM25** (keyword search), coupled with **Whisper** for voice transcription and REST API integrations, reducing irrelevant retrievals by **35%** and cutting response latency by **25%**

EatWise AI — Disease-Based Food Recommendation System

[Code](#)

- Built an ML-powered food recommendation system that takes user inputs (age, name, dietary preference, and disease) and curates **personalized lists of recommended and avoided foods** across **9 disease categories**, achieving **93% model accuracy**
- Engineered scalable backend logic and optimized recommendation workflows, reducing prediction response time by **30%** and supporting dietary preferences across both **vegetarian and non-vegetarian** profiles

Trading Bot Web App

[Code](#)

- Built a **Python + Flask** automated trading bot that executes trades using **TWAP, OCO, and limit order** strategies, allowing users to set target price levels and trigger buys automatically when the market hits the specified threshold
- Integrated real-time **Binance API** to handle **1000+ transactions/day**, improving execution efficiency by **25%** and boosting ROI by **18%** through strategy-driven order automation

Expense Tracker — MERN App

[Code](#)

- Built a full-stack **MERN** expense tracking app with JWT authentication, enabling users to monitor monthly expenses and savings with **interactive line charts and bar graphs** for visual expenditure analysis
- Supported **1000+ transactions** with last 60 entries exportable as an **Excel sheet**, optimized MongoDB queries to improve query speed by **30%** and reduce load time by **25%**

SKILLS

Languages: C++, JavaScript, TypeScript, Python

Frameworks: React, Angular, Node.js, Express

Backend: REST APIs, Web APIs, Full Stack Development

Databases: MongoDB, MySQL, PostgreSQL, ChromaDB

Tools: Git, Postman, DevOps Basics

Core: DSA, OOP, DBMS, OS

CERTIFICATIONS

MERN Stack Development Certification

[Certificate](#)

Full-stack training with MongoDB, Express, React, Node.js
